Wednesday's Testimony at Westerly

Dispatcher H. P. Haley Gives Further Evidence in Mansfield Case-Signal Tender Joseph Parra, Lineman F. L. Babcock, H. F. Roche, Electrician Foss and Others Describe Lever and Signal Condition Following Bradford Wreck.

Wednesday was the fifth day of the trial of Charles H. Mansfield on the charge of manslaughter, before Judge Rathbun and a jury in the superior court for Washington county, in session at Westerly. The accused was engineer of the Gilt Edge express, train 25, that crash d into the rear end of the New London local train, 633, at Bradford, in the evening of April 17, last.

Herman P. Haley, train despatcher at New London, who was on the wit-

Herman P. Haley, train despatcher at New London, who was on the witness stand when court adjourned on Tuesday, resumed his testimony when court reconvened Wednesday morning. Upon cross-examination by Mr. Fitzgeraid, the witness testified, in relation to the train sheet, that it was not made out entirely by him but by two others, all working on eight hour shifts. He was on duty from 3 to 11 o'clock on the date of the Bradford wreck. He gave the time of the passage of train 25, showing arrival at Kingston 7.19, Shannock 7.24, Wood River Junction 7.27 and Bradford 7.32. These times are reported by towermen. The time of 633 was at Kingston 7.02, Shannock 7.15, Wood iver Junction 7.18 and Bradford 7.26. At Kingston the difference between the Junction 7.18 and Bradford 7.26. At Kingston the difference between the trains was 12 minutes, 9 minutes at Wood River and six minutes at Brad-ford. Train 522 displayed ford. Train 633 delay at Kingston was noticed, and was near the scheduled time of train 25. Between Auburn and bradford he did not notice any loss of time of train 25.

Mr. Haley could not tell who sent or received the messages at the Brad-ford tower, that is there were no mes-sages, but rather instructions, or conford tower, that is there were no messages, but rather instructions, or conversation, he said. He communicated to 633 and 25 through the towerman. He had no record of the instructions given on the night of the wreck, from the train sheet is the record, but does not show that 633 was ordered into a siding. He is supposed to make notes. It was not the custom of locometive of 623 to lose steam at Bradford or the 25 was to stop there, and therefore were occurrences out of the ordinary, and it was not the rule for 25 to get into New London before 633. Another train, 623, passes 633 at Kingstor regularly and that is not extraordinary. No provision for 25 to pass 633 except at New London where 373 finishes the trip. The instructions to towermen was to put 633 on the siding and to signal 25 to stop and take the passengers of 633 at Bradford. The orders of train despatcher to towermen is absolute.

After getting rotice of delay of 633 at Bradford he made effort to get instructions to 25 at Wood River Junction, but it was too late, as 25 was going by that tower. He could no get word to 25 at Wood River to stop get word to 25 at wood River to stop at Bradford. After that did not notify Bradford that 25 had passed Wood River Junction. The message was first sent to Wood River and then to Bradford. The towerman at Wood River could probably have thrown the starter and stopped 25, if the train has starter and stopped 25, if the train had not proceeded too far on clear signals from Wood River. There have been cases in emergencies when signals have been thrown in front of engineers. The train would have been held up by hand signal by lantern, if message had reached Wood River in time, that is by flagging the train by constitution. that is by flagging the train, but gave orders to stop at Bradford. To flag er stop meant about the same thing. To stop means by lantern or by signals. Order to towerman to flag train means to stop, and witness was liable to use either word. By flagging it meant giving the signal by swinging the lantern, he said. The flagging of a train, Mr. Haley said, meant to stop, and it was at the discretion of towerman. He would always the towerman. towerman. He would almost stop the train by signals and then go out and flag the train at night with a red lanling the train at night with a red lantern. He could not recall telling the towerman at Wood River not to throw the starter signal. He said Ross was the operator, but he did not know where Ross was now, but did not think he was in the employ of the company, and did not know whether his whereabouts is unknown. If witness could have stopped 25 at Wood River he would not have sent like instructions to Bradford. The instructional Bradford were timed, as being received instructions

When witness was notified from Bradford that 633 engine was losing steam it occasioned no worriment, he told Mr. Otis, counsel for the state. He fold Mr. Otis, counsel for the state. He did not consider it any cause for a 'arm as to the safety of passengers on train 25. There was no reason, he said, to hurry except to save time. He had no cause to believe that there was to be a collision between train 25 and the same of the same anothing in the situation. There was nothing in the situa-that he regarded as extraordition that he regarded as extraordi-nary. It is common to put trains on sidings to let other trains go by. He believed that train 25 would be stop-ped at Bradford by signals, after failing at Wood iver Junction.

The witness testified that he knew there were signals that could be used at Bradford, after 25 passed Wood iver. The situation was not one of iver. The situation was not one or emergency, and there is no special form for emerging instructions. It would not be proper to give order to would not be proper to give order to throw signal of danger in "front of engineer's face." It would not be pro-per for towerman at Wood River to throw any signal in front of engithrow any signal in front of engineer, without instructions from train despatcher, representing the superintendent. Train 633 came to Bradford at 7.26 and train 25 passed Wood River at 7.27, and therefore had interval of one minute to send message to 25 at Wood River, and this was not done until message was cent to Produce and the send message to 25 at Wood River, and this was not done until message was cent to Produce and the send message was cent to produce the send message to 25 and 10 done until message was sent to Brad-ford to put 623 on siding. The train 23 passes 623 at Kingston regularly, but no special record is made of that on the time sheet, or of the like work of any other trains, except as to the of any other trains, except as to the time. There have been cases where passengers from local trains have been transferred to express trains, and would consider that an emergency, as It was not of daily routine.

It is not usual to stop express trains en route unless for some special rea-son, testified Mr. Haley in response to queries by Mr. Fitzgerald. All passenger trains are of the same class, but schedules are arranged to allow through trains to have the right of way, and in some instances express trains are scheduled to pass local trains. At Kingston twelve minutes is allowed to get 623 out of the way of 23, according to schedule. After he received message from 633 of the trouble with the locomotive at Brad-

Next Week M-L-Will Be Advertised And You Will

asked Mr. Fitzgerald. To this the wit-ness replied, "No, sir; not necessarily, but could go to the starter at Wood River, before going into the signals at Bradford."

Witness considered that Bradford could stop 25 all right, but the message was sent to Wood River to give information at that place in regard to transfer of transf transfer of passengers at Bradford. Train 25 would have to get the red light to stop at Bradford and the signal or lantern must be used. There is no signal that can be given to a train by a towerman to come along slowly to get a message, unless it may be a red lantern to stop and then a vellow lantern for the train to slow yellow lantern for the train to slow and receive the message.

Train Despatcher Haley resumed his testimony at the afternoon session, being questioned by Mr. Fitzgerald. It was his custom to notify that train was his custom to notify that train was to stop at station beyond and that's why he notified Wood River Junction first. Trains 25 and 633 were both scheduled to stop at Westerly, a regular stop, and passengers could be transferred at Westerly. Had 633 proceeded 25 would have to stop at Bradford on the night of the wreck, and could have sent word in time to hold up 25. It was a question whether 633 could make Westerly and it was to be held at Bradford to transfer New York passengers and then was to proceed to New London from the Bradford siding.

In response to query from Attorney Otis, the witness said he could not recall just what the message from Bradford read, but knew it was in re-lation to engine trouble and not able to make time to New London. The message sent by witness for train 25 at Wood River could have been delivered without having the train come livered without having the train come to a full stop. There was no reason why one train should not follow another, provided they were kept separated by the block system. The towermen control the block system, but the block system is not necessarily connected with the despatcher's work, only upon consultation. The towermen depend somewhat upon conditions when matters out of the ordinary arise.

Mr. Haley said he had been a train despatcher for twelve years and it has been frequent for one train to be in a block and another train following in

Simeon Fish, of Poquonnoc, a locomotive engineer. testified he was in the engine of train 633 when it stopped as Bradford tower at 7.25 on the night of April 17. He was "deadheading" from Providence to Midway on that night and "fired" the engine from Kingston to Bradford. He knew the train was close on 25 time, and as soon as train stopped Engineer Weatherly looked at his watch and said the time was 7.25. Witness did not look at 13 s watch. He was not working when he was summoned to court, as he was off sick. Simeon Fish, of Poquonnoc, a loco-

Joseph Parro testified that he was at Bradford on the night of the railat Bradford on the night of the rail-road wreck, and he went up to the signal. It was the distant signal and he went there at night and remained there until 5.30 in the morning. He did not go to the signal alone for there was another fellow with him. No ne touched the signal while he was

In reply to Mr. Fitzgerald he said he knew the signal. He went to see the distant signal. At the Providence hearing he said he did not go to the distant signal, but to the signal just across the bridge. Witness said he did not want to talk with Mr. Fitzgeraid, for he had been here two days and what he said in Providence before the willities commission was right Witness said he wanted an interpreter and Leo Ruisi who was in the court room was called. Through the interpretor, the witness denied some statements he made at the commission hearing in Providence, according to the record. Witness said he was at the station, had been working all day and was sent to the signal station and remained there all night alone. Witness said he had no interpreter at the hearing in Providence. In reply to Mr. Fitzgerald he said

Frederick L. Babcock, a lineman, testified that he was sent to the dis-tant signal at 2.30 in the morning aft-er the wreck, to watch the signal. He relieved Parro, and was there until 10.30 when he was released by Mr. Roche, section man at Stonington.

Howard F. Roche, helper in signal Howard F. Roche, helper in signal service was sent out to guard the distant signal, which was set at normal no one touched it while he was there. He was assigned to watch duty the next day and the signal was still at danger. He remained there until 5.30 and he was told by Mr. Dobson of the signal department.

and he was told by Mr. Dobson of the signal department.

Joseph Parro was recalled and identified F. H. Wickerson as the man who went to the signal with him. Witness told Mr. Fitzgerald he did not want to talk to him, but he said he did talk with Attorneys Otis and Phillips at Kingston without any interpreter. He went to court in Kingston because the boss told him to go there.

Thomas Haggerty, a signal keeper, testified that he was at Bradford, and sent the next day after the wreck to the distant signal, to watch it, and the signal was set at caution, and he was an duty the next day from 10.30 was on duty the next day from 10.30 p. m. to 2.40 a. m., and the distant sig-nal was at caution all the time he was there. He is and was then employed by the railroad and in the signal de-partment that is to keep the signals right and in working order. He was on duty alone at the signal, and no one was sent out to watch him.

James Foss, chief electrician of the signal department of the railroad company, testified that he arrived in Bradford on the morning after the wreck, and was assigned to duty in the tower, to see that the levers were not touched for the west bound track. He later served as watchman at the distant signal and relieved Thomas Hagserty, who in turn relieved the witness. Home of witness was in Mansfield, Mass., and he was sent to court by Foreman Tisdale. He went into the tower and several were in there and a spare towerman was on duty. Mr. Morrison, the head of the department, was there. He was watching the levers in the tower from 10 a. ing the levers in the tower from 10 a.m. to 5.50 p.m., and relieved Hagger-ty at 6.35, and when relieved went to

The Expression of Quality In a Motor Car

UALITY, in a motor car, expresses itself in appearance as well as in per-

It announces itself unmistakably - as good breeding discloses itself in a man or a woman.

You scarcely know why a woman of refinement always seems exquisitely gowned, no matter how simple her attire.

But the moment she enters a room, she is the quiet center of observation.

You scarcely know why you instantly recognize a well dressed man - nothing about him intrudes itself, but everything about him is impressive.

You cannot tell why a silent room speaks to you in eloquent tones of the taste and refinement that designed and decorated it.

True artistry in the attire of a man or a woman, or in the appointments of a room, or in the design of a motor car, consists in blending many small beauties into one beauty.

Judged by this difficult criterion, we believe the new Cadillacs will exceed your highest and most critical expectations.

Body Styles and Prices

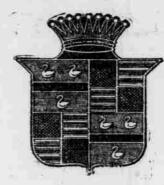

The Type-55 Cadillac will be available with a complete variety of body styles, as follows:—

Open cars, 125 inch wheelbase; Seven Passenger with disappearing auxiliary seats \$2030. Four Passen-ger Phaeton \$2080. Two Passenger Roadster with two passenger disap-pearing rumble seat \$2080. Four Pas-senger Club Roadsta \$2080. senger Club Roadster \$2080.

Convertible styles, 125 Inch wheel-base; Seven Passenger with Cadillac body (Springfield type) \$2575. Four Passenger Victoria (convertible) \$2550.

Enclosed cars, 125 inch wheelbase; Four Passenger Coupe \$2800. Five Passenger Brougham \$2950.

Enclosed cars, 132 Inch wheelbase; Seven Passenger Limousine \$3600, Seven Passenger Landaulet \$3750. Prices include standard equipment, F. O. B. Detroit. Prices are subject to advance without notice.

Cadillacs are beautiful cars to look upon.

The simplicity of design and grace of contour are unmarred by anything which savors of the tawdry or

The crown fenders blend harmoniously with the pleasing lines of the bodies.

Running boards are clear of encumbrances which mar a

clean-cut exterior.

You enter the car and alight from it through doors of lib-

Door handles are easy of action and so designed that they are not apt to catch the clothing.

Entrance to the driver's seat is facilitated by the hinged steering wheel which swings downward, but is held securely

when driving. The tonneau entrance is illuminated at night .by an electric light.

As you enter the car you are impressed with the roominess of the interior arrangement.

The simple luxury of the appointments is inviting.

Cadiliac upholstery is truly a revelation. It represents the most modern developments in thorough comfort-giving qualities. The covering material is plaited over specially designed deep coil springs.

Extreme inequalities of the road are reduced in their effects, to the lowest minimum, while the lesser inequalities are lost in its soft resilience.

Auxiliary seats-in cars so equipped-fold anugly into recosses, out of the way when not in service.

There are convenient pockets in the doors.

In every detail there is striking evidence of the forethought to provide every comfort, convenience and facility which the most exacting could demand.

And, as you relax and rest from the strain and fatigue which metering may heretofore have imposed, you appreclate more and more the delight and inexpressible charm of owning and driving a Cadillac.

WESTERLY INTEREST IN POLITICS

Efforts Underway to Name New Town Committee at Republican Caucus-Desire for Men Who Will be True to Fellow Men-How the Committee Has Operated.

election day. This is all preliminary to the caucus that is to be held in the town hall this (Thursday) evening, with the expectation that what has been printed will not be accepted as truth by the majority of readers.

An investigation shows that the whole situation is simple and it is but just to all concerned that the real facts be made known. It appears that the political affairs of the town of West-erly, insolar as the nominations for town officers are concerned, have been left to the judgment of the town committee, under the apprehension that all was on the level. The town committee is composed of fourteen citizens, seven from each of the two voting districts. This town committee is nominated and elected by each district at a caucus which is held in September, and that caucus will be held this

A clearer understanding of the fact-can be given by referring to the town committee of 1916 that met in June to recommend candidates for two coun cilmen and other officers. The commit tee at that time was composed of George Benjamin Utter, D. Harold Rogers, Albert Pierson, Charles F. George Benjamin Utter, D. Harold Rogers, Albert Pierson, Charles F. Berry, Dr. John M. O'Connell, Edward J. Burdick and Howard E. Thorp for the First district, and William Clark, Arthur L. Perry, Samuel H. Davis, Martin H. Spellman, Lewis Stanton, James McCall and Daniel Larkin from the Second district.

In addition to the election of a town committee, delegates to the state convention will be chosen, and Westerly is entitled to six delegates. It has been an almost universal custom to include the senator and the two representatives, the Westerly delegation to the general assembly, in the list of delegates to the state convention. It is understood that the present fown committee, as above named, at a meeting held recently decided to nomvertising columns of the Bulletin. In addition to the election of a tow

If the published surmises, conjectures and deductions were to be believed, or taken with any degree of seriousness, which the major part of the sensible electorate of the town of Westerly are not doing, the town would be on the verge of infantile politics. During the past week there have been statements published that are not warranted by facts and evidently in the interest of individuals who desire to pose as the real leaders of the republican party, the only party of political consequence in the town of Westerly, and to belittle other republicans whose vote counts just as much as that of the other fellow's on election day. This is all preliminary to the caucus that is to be held in the town of Westerly. The present to the caucus that is to be held in the true wention at the caucus this evening: Senator Louis W. Arnold, Representative Vention at the caucus this evening: Senator Louis W. Arnold, Representative Vention at the caucus the caucus the caucus the caucus the caucus the caucus that constitute the caucus that consequence in the town of the state convention. The number of the proposition of the caucus that the caucus th Utter, and he is extremely anxious to be retained in that position, and therefore is intensely interested in the political game.

Now just a short chapter on the workings of the town committee that met last May to arrange the slate for the caucus to nominate councilmen and other town officers. Practically all of the members were present except Mr. Thorp and Mr. Larkin, both members of the town council, and who held to (Continued on Page Twelve)
